Systemaattinen kirjallisuuskatsaus menetelmänä

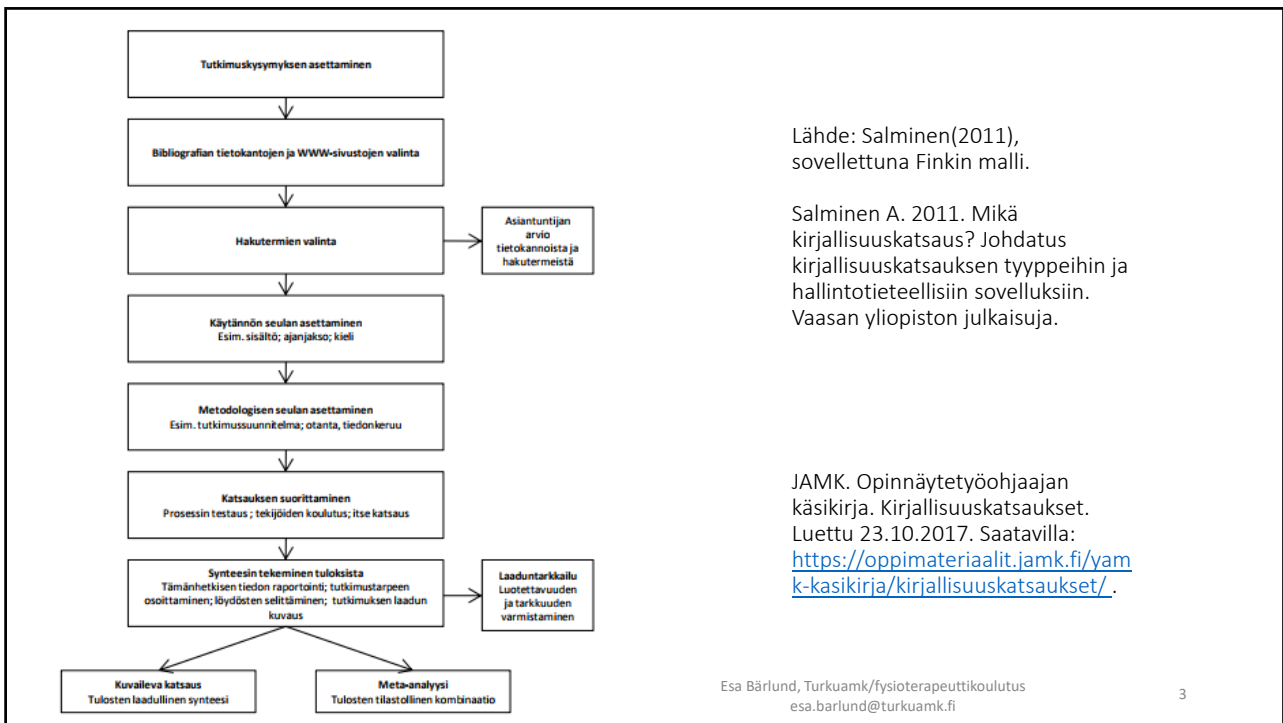

- Tavoitteena vastata ennalta määritettyyn tutkimuskysymykseen – esim. miten peliteknologia vaikuttaa ihmisen toimintakykyyn
- Määritellään etukäteen mukaan otettavien tutkimusten kelpoisuuskriteerit
- Toistettavissa oleva systemaattinen kirjallisuushaku jolla pyritään löytämään kaikki materiaali joka vastaa kelpoisuuskriteereitä
- Mukaan otettujen tutkimusten laadun arviointi
- Mukaan otettujen tutkimusten systemaattinen esittely ja synteesi tutkimusten tuloksista
- Voidaan edetä myös meta-analysiin

Registration of upcoming review – e.g PROSPERO

Connecting research and researchers

The screenshot shows the PROSPERO website interface. At the top left is the NIHR logo (National Institute for Health Research). The main header reads 'PROSPERO International prospective register of systematic reviews'. Below this is a navigation bar with 'Home | About PROSPERO | How to register' and 'Search | Log in | Join'. A central banner says 'Welcome to PROSPERO International prospective register of systematic reviews'. At the bottom, there are two main buttons: 'Register a review' and 'Search PROSPERO'.

PICOS

Systematic Reviews - Research Guide

<https://libguides.murdoch.edu.au/systematic/PICO>

Criteria for considering studies for this review were based on the PICO (Population, Intervention, Comparison, and Outcome) framework as follows:

- ▶ **Patients:** Adults with primary/idiopathic Parkinson's disease of any severity, excluding any other concurrent neurological condition.
- ▶ **Intervention:** Progressive resistance training defined as training which (A) consists of a small number of repetitions until fatigue, (B) allows sufficient rest between exercises for recovery and (C) increases the resistance as patient's ability to generate force
- ▶ **Comparison:** Progressive resistance training versus no treatment, placebo or other treatment in randomised controlled or controlled clinical trials.
- ▶ **Outcome:** Any outcome.

Criteria for considering studies for this review were based on PICO (Population, Intervention, Comparison, and Outcome) framework as follows:

- population: adult stroke survivors;
- intervention: training defined as aerobic due to submaximal load level during exercises;
- comparison: randomized controlled trials (RCTs) or clinical controlled trials (CCTs) of aerobic training compared to various training types or no training;
- outcome: change in aerobic capacity, measured as VO₂max.

Onko muuta kuin PICO?

SPICE or SPIDER for Qualitative or Quantitative Studies

Two other mnemonics may also be used to create protocols for both qualitative and quantitative studies - **SPIDER** and **SPICE**.

SPIDER can be used for both qualitative and quantitative studies:

S	PI	D	E	R
Sample	Phenomenon of Interest	Design	Evaluation	Research Type
Sample size may vary in qualitative and quantitative studies	Phenomena of Interest include behaviours, experiences and interventions	Design influences the strength of the study analysis and findings	Evaluation outcomes may include more subjective outcomes - such as views, attitudes, etc.	Research types include qualitative, quantitative or mixed method studies

Within social sciences research, **SPICE** may be more appropriate for formulating research questions:

S	P	I	C	E
Setting	Perspective	Intervention	Comparison	Evaluation
Setting is the context for the question - <i>where</i>	Perspective is the users, potential users, or stakeholders of the service - <i>for whom</i>	Intervention is the action taken for the users, potential users, or stakeholders - <i>what</i>	Comparison is the alternative actions or outcomes - <i>what else</i>	Evaluation is the result or measurement that will determine the success of the intervention - <i>what result</i> or <i>how well</i>

Data extraction – building tables

Table 1 Descriptive characteristics of included studies

Study/year/country	Cases/controls, N (% men)		Age *	Case treatment	Intensity and duration	Control treatment	Response to treatment
	Baseline	Follow-up					
Allen 2010 Australia	24 (54)/24 (54)	21/24	66/68	Progressive lower limb strengthening and balance exercises (a monthly exercise class, remaining exercise sessions at home). Standardised falls prevention advice (booklet)	40–60 min 3 times per week for 6 months	Usual care. Standardised falls prevention advice (booklet)	Insignificant difference
Bloomer 2008 USA	8 (50)/8 (50)	6/7	61/57	Three sets of 5–8 repetitions: leg press, leg curl and calf press. Increased weight by 5–10% when 8 repetitions were completed for all 3 sets	Two times per week for 2 months	Usual activity	Positive
Bridgewater 1997 Australia	13 (69)/13 (54)	13/13	67/66	15 min warm-up. Trunk muscles (back extensors and abdominals): 10 repetitions of 7 s isometric contractions with 7 s rest. Progression: as individual ability and improvement allowed	Two times per week for 3 months	Usual activity and 'interest talks' on health issues Once every 3 weeks	Positive
Combs 2013	17 (65)/14 (71)	11/11	67/68	15 min warm-up. Boxing circuit, endurance. Progression: self-progressed by completing	24–36×90 min for 3 months	Strengthening, endurance and balance exercises	Positive

12

12

Lopuksi: Ja kun tehdään systemaattista katsausta, toivotaan saatavan vastaus myös sille että kannattaako ...

Table 3 Results of meta-analyses

Outcome (units), study	Cases, mean (SD)			Controls, mean (SD)			Effect size		Egger's regression		
	Baseline	Follow-up	N	Baseline	Follow-up	N	Raw mean difference	95% CI	I ² (%)	Intercept	95% CI
Fast walking speed (ms)							0.06	0.02 to 0.11	61	-3.27	-69.0 to 62.4
Allen <i>et al</i> ¹¹	1.47 (0.38)	1.61 (0.35)	21	1.54 (0.35)	1.48 (0.43)	24	0.2	-0.001 to 0.40			
Paul <i>et al</i> ²⁰	-	0.02 (0.16)*	6	-	0.01 (0.19)*	9	0.01	-0.18 to 0.2			
Shulman <i>et al</i> ^{22†}	0.84 (0.05)	0.84 (0.05)	22	0.85 (0.05)	0.79 (0.05)	22	0.06	0.03 to 0.09			
Comfortable walking speed (ms)							0.03	0.01 to 0.05	15	-1.34	-13.8 to 11.2

Huomioidaan etukäteen tutkimuskysymyksiä määrittäessä

Kuten aikaisemmin jo mainittu: Ja jotta asia ei näyttäisi liian synkältä, systemaattisen kirjallisuuskatsauksen vaiheet voidaan työstää sähköisessä järjestelmässä (Covidence), muutaman katsauksen voi tehdä ilmaiseksi. Löytyy osoitteesta: <<https://www.covidence.org/home>>.

13

14

Kirjallisuuden systemaattisen hakustrategian vaiheet (Bramer 2019)

1. Determining a clear and focused question
2. Describing the articles that can answer the question
3. Deciding which key concepts address the different elements of the question
4. Deciding which elements should be used for the best results
5. Choosing an appropriate database and interface to start with
6. Documenting the search process in a text document
7. Identifying appropriate index terms in the thesaurus of the first database
8. Identifying synonyms in the thesaurus
9. Adding variations in search terms
10. Using database-appropriate syntax, with parentheses, Boolean operators, and field codes
11. Optimizing the search
12. Evaluate the initial results
13. Checking for errors
14. Translating to other databases
15. Testing and reiteration

Bramer, W. 2019. Serving Evidence Syntheses. Improving literature retrieval in systematic reviews. Erasmus University Rotterdam. Luettavissa osoitteessa: <<https://repub.eur.nl/pub/120107>>.

Esa Bärlund, Turkuamk/fysioterapeuttikoulutus

esa.barlund@turkuamk.fi

15

15

Spesifisyys vs. tärkeys (Bramer 2019)

Esa Bärlund, Turkuamk/fysioterapeuttikoulutus
esa.barlund@turkuamk.fi

16

16

5. Choosing an appropriate database and interface to start with

Bramer (2019) ehdottaa lääketieteeseen orientoivissa hauissa seuraavaa järjestystä

1. Embase -> MEDLINE; parempi systemaattinen hakusanaluettelo (tesaurus) kuin itse MEDLINEssa(MeSH); Embase hakusanojen spesifisyys parempi
2. MEDLINE (MeSH)

Lisäksi käytännön syy: Embasessa haut helpompi "kääntää" MeSH.n hauiksi, toisinpäin toteutettuna vaikeampaa.

Bramer(2019) ehdottaa myös oman hakutyötavan kehittämistä jossa aloitetaan ja edetään aina samalla tavalla hakutietokannasta toiseen.

Step 9: Adding variations in search terms (e.g., truncation, spelling differences, abbreviations, opposites)

- * saadaan hakusana katkaistua esim therapy -> therap* (hakee therapy, therapies, therapeutic ja kaikki sanat jotka alkavat therap
- sanat saattavat olla eri tavoin kirjoitettuna amerikanenglanniksi kuin brittienglanniksi; molemmat sanat pitää hakea esim. paeditrics vs pediatrics; voidaan korvata joskus p?diatrics

Table 2.1: Field codes in five most used interfaces for biomedical literature searching

	PubMed	Ovid	EBSCOhost	Embase.com	ProQuest
Title/abstract	[tiab] ¹	(,ab,ti	TI () OR AB () ²	(,ab,ti	AB,TI()
All fields	[All Fields]	.af.	?		ALL
Thesaurus term	[mesh;noexp]	.../	MH "..."	'.../de	MESH(...)
Including narrower	[mesh]	exp .../	MH "...+"	'.../exp	MESH#(...)
Combined subheading	.../sh[mesh]	exp .../sh	MH "...+sh"	'.../exp/dm_sh ⁴	MESH(...LNK...)
Free subheading	[sh] ⁵	xs. or fs ⁵	MW	!nk ⁵	
Publication type	[pt] ⁶	.pt. or exp .../ ⁶	PT	!t ⁶	RTYPE
Proximity	?	ADJn	Nn	NEAR/n - NEXT/n	N/n
Exact phrase	"double quotes"	No quotes needed	"double quotes"	'single quotes'	"double quotes"
Truncated phrase	Use-hyphen*	No quote*	No quote*	'single quote*'	"Double quote*"
Truncation	End	End/ mid	End/ mid	End/ mid	End / mid / start
Infinite	*	* or \$	*	*	*
0 or 1 character	-	?	#	-	\$1
1 character	-	#	?	?#	?
Added to database since	yyyy/mm/dd:yyyy/mm/dd [edat] ⁹ (or [mhda])	limit #N to rd-yyyyymmdd-yyyyymmdd ¹⁰	EM yyyyymmdd-yyyyymmdd	(dd-mm-yyyy)/sd	LUPD (yyyyymmdd)
Publication period (years)	yyyy-yyyy[dp]	limit #N to yr=yyyy-yyyy ¹⁰	PY yyyy-yyyy	[yyyy-yyyy]/py	YR (yyyy-yyyy)
Record sets	#1	1 ¹¹	S1	#1	S1

- 1 In PubMed, [tiab] should be placed after each search term.
- 2 EBSCOhost does not allow a combination of fields; all search terms for the title field need to be repeated for the abstract field.
- 3 EBSCOhost and Embase.com do not use an 'all fields' code; a term without a field code is searched in all fields.
- 4 Subheadings in Embase.com are only applied to diseases (/dm_), drugs (/dd_), or devices (/dv_).
- 5 [sh] and .xs. include narrower terms for subheadings; fs. and !nk do not.
- 6 [pt] and exp .../ includes narrower publication types; pt. and !t do not.
- 7 In PubMed, proximity searching is not available; search the exact phrase (truncated or between double quotes) or use the Boolean AND combination.
- 8 The question mark does not work in combination with field codes.
- 9 The field [edat] refers to the entry date, when the record was added to PubMed. [mhda] refers to the MeSH date, when the record was last edited.
- 10 Adding a date limit can only be applied in a separate record set.
- 11 If a number is to be searched in the text, it should be put between double quotes (e.g., "1").
